RADON LEVELS IN LANCASTER COUNTY

Lancaster County has some of the highest and most dangerous levels of radon in Pennsylvania.

Pennsylvania's geology makes the state prone to higher radon levels.

The average indoor radon levels of Lancaster County, as determined by radon test results is 12.2 pCi/L. Radon is radioactive, colorless, odorless, and tasteless.

The gas can enter homes through cracks in walls, floors, and foundations.

Radon gas is a carcinogen which causes lung cancer.

Studies have shown that radon is the primary cause of lung cancer among people who have never smoked. A safe level of radon gas is no radon gas.

The US EPA has set an action level of 4 pCi/L. At or above this level of radon, it is recommended that you take corrective measures.

KEYSTONE ETS PERFORMS BOTH SHORT TERM AND LONG TERM RADON TESTING FOR YOUR HOME OR FACILITY.
